

## MSR POCKET ROCKET STOVE

I used and LOVED my [MSR Pocket Rocket](#) throughout the duration of my AT thru-hike. It's lightweight (3 ounces), compact, durable and relatively inexpensive. This stove will boil 1 liter of water in less than 4 minutes.

What I liked best about the pocket rocket is you can adjust the flame to choose whether you want to simmer or boil. Alcohol stoves don't allow that luxury.

*Teaching my little sister, Montana, how to cook with the Pocket Rocket*

If you have any questions or thoughts on the MSR Pocket Rocket, feel free to share them below!

Once a week I will be posting a gear item I used (or saw used) enough to feel comfortable recommending. Hopefully, this helps stimulate conversation about gear and will assist beginning backpackers with gear selection. (These are amazon affiliate links. If you'd like to help support my work, you can shop through any of these links. There is no need to buy this specific item; simply click the link and do your normal shopping. At no additional cost, your Amazon purchases will help support what I do.
